

DATA CLASSIFICATION

WHAT WE OFFER

Enabling your staff to work effectively without compromising your organization's overall security, INFRAAX's data classification services will:

- ▼ create, enhance, and share a classification system focused on your business priorities;
- ▼ revise your existing classification system to maintain effectiveness in evolving environments.

THE ISSUES

Data classification means assigning a sensitivity level to information as it is created, amended, enhanced, stored or transmitted. Therefore, data classification must determine the extent to which information should be controlled and secured for confidentiality, availability and integrity. It also indicates its value as a business asset.

InfoSec isn't to be taken lightly, but you shouldn't be over protective either! Though there are very real threats you need to address, to be independent and fully efficient your staff needs to be able to access records every day, and you should try to facilitate this whenever possible. In the end, data classification is a risk-based decision.

HOW WE WORK

INFRAAX will help you use your intimate knowledge of the risks your business faces to prioritize how and where you need to better secure your information.

But categorizing all your data can be a daunting task. That's why INFRAAX will guide you through a step-by-step process to implement the criteria of success: cost savings, application availability, recovery and performance.

RESULTS

Your critical information will be classified—providing a clear link between your data and your process—as much as your business requires, no more, no less!

WHERE DO STANDARDS FIT IN?

Analysis may reveal that your organization needs to implement an access and security program to protect personal information as is required per the Privacy and Personal Information Protection Act.
