

SECURITY POSTURE ASSESSMENT

WHAT WE OFFER

Ensuring risk mitigation practices and implemented solutions are actually effective, INFRAAX's experts in Security Posture Assessment will:

- ▼ provide a snapshot of your current security posture;
- ▼ identify vulnerabilities and deviations from policy and industry best practices;
- ▼ recommend and improve control needed to protect data;
- ▼ facilitate consistent use of technology and procedures without duplicating efforts.

THE ISSUES

While the number of new threats increases at a dizzying rate, network and system configurations are constantly changing. Security experts no longer view security as just a product or a solution. Your organization needs to have evidence that the solutions and strategies in use are actually providing the comprehensive and in-depth defense you require.

HOW WE WORK

INFRAAX provides high-level assessments, and when needed, detailed evaluations of your network security architecture, monitoring and incident response program and management practices. Each of our assessments will be perfectly tailored to your needs and specifications.

This third party assessment allows your organization to strengthen your security posture and reduce exposures to compliance infractions.

RESULTS

Thanks to our proven expertise and experience, our security posture assessment services will help to protect your organization by providing a robust and comprehensive defense. The benefits are stability and protection from fraud, waste and abuse.

HOW DO STANDARDS FIT IN?

Our trusted consultants will help you use the INFOSEC Assessment Methodology (IAM), and ISO/IEC 18028-2 Network Security: Architecture so that it can be used as a baseline for analyzing Security Posture.
